

Play back your MXF and GXF files without hassle

# XFReader.

Use your turnkey reader with all your files, whatever their essence

XFReader is a high-performance viewer enabling you to browse all your MXF and GXF files, whatever their wrapped essence format.

The XFReader is completely agnostic to any HD or SD video format and has been widely adopted by the Broadcasting industry, including TV channels and software companies.

The application is easy to install on any Windows platform and makes media viewing on local or remote PCs easier and trouble-free.

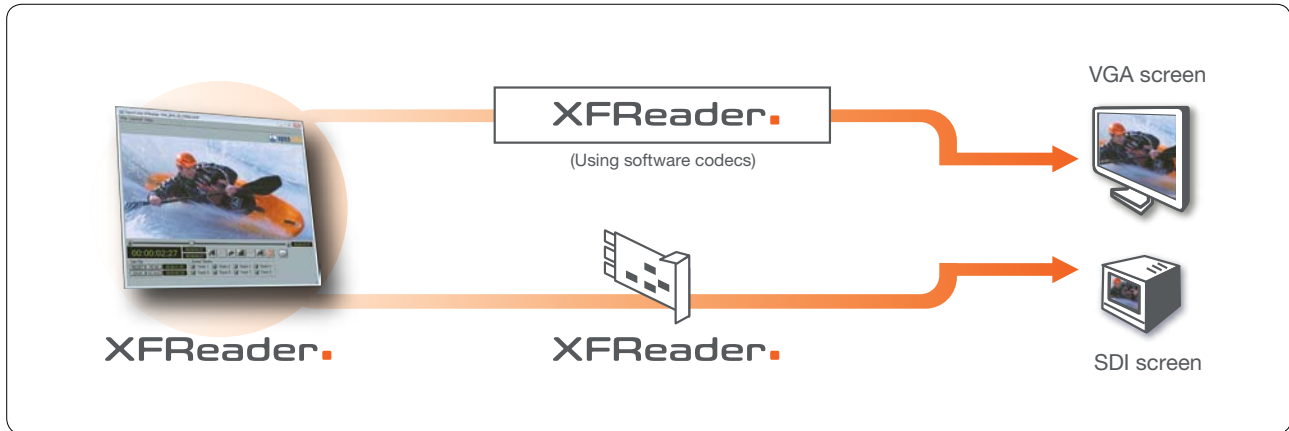

## Key Features

- Browse and verify any type of HD Media on PC display or HD-SDI screen: Mpeg2HD, DNxHD®, AVC-I, Jpeg2k, H.264, DVCproHD
- Simply check DCP with high or low-res. viewing
- Enable multiple MXF timecode display with jump
- Handle your media with ease: play, select audio tracks and create sub-clips

A simple and easy-to-use tool to control MXF, GXF media on VGA and SDI screens

### A ready-to-use viewer

XFFReader is ready-to-use upon delivery with a video software decoder: double-click or simply drag 'n' drop any MXF/GXF file and the playback process will automatically start, allowing you to view and listen to a full range of audio and video content.

### Opt for the HD-SDI file display

When linked to an SDI video board, the XFFReader becomes an easy-to-use and highly efficient SDI player, freeing one or more video channels on your Playout server.

You can then check the content on a professional video monitor or perform a video tape export without hassle.

### An easy-to-integrate module

XFFReader is also offered as an ActiveX module that can be integrated directly into a Web browser or a Windows application.

The module can be easily adapted to existing tools, providing quick and reliable support for both MXF and GXF formats.

### New with version 2.3

- MXF DNxHD® playing
- MXF DCP Jpeg2k viewing in high res. or low res.
- Multiple HD-SDI card support
- Enhancement for big MXF file browsing
- Dolby-E HD-SDI playout improvement
